

Ultrapac® HED/ALD/MSD Type 0005 to 1000

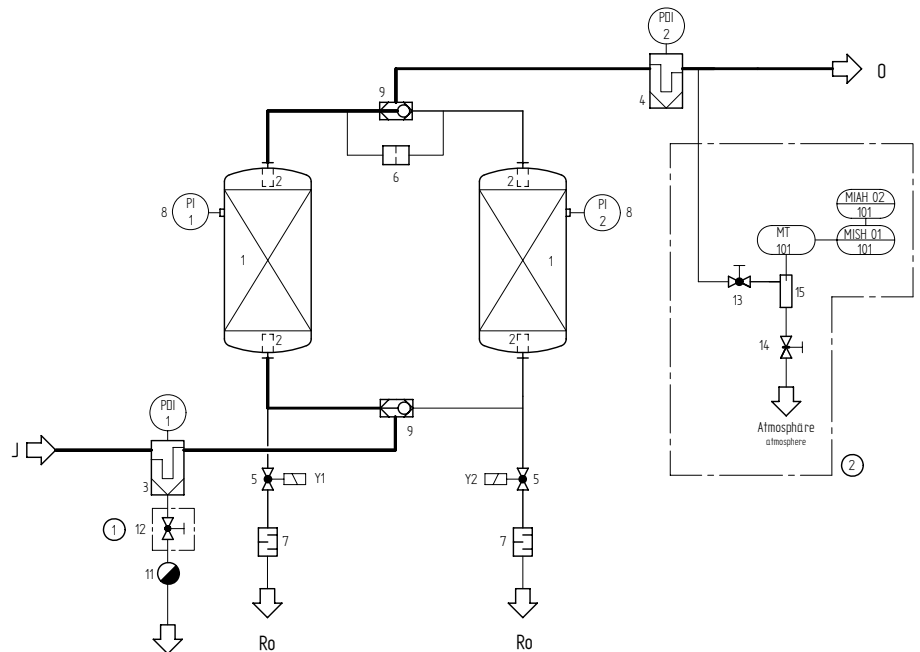

Complete purification package with heatless adsorption dryer, pre-, afterfilter and level-controlled electronic condensate drain.

Compressed air is lead through the inlet of the dryer (J) and across the prefilter (3). At this stage, the air is cleaned from particles and condensate. The condensate is removed via the level-controlled electronic condensate drain (11).

Via the lower shuttle valve (9), the air is lead into the adsorption vessel (1), in which the air is dried down to the required dewpoint. Via the upper shuttle valve (9), the air is let into an afterfilter (4), in which possibly released particles from the desiccant bed are retained. Via the outlet (O), the clean and dry air is lead into the compressed air network and to the point of use.

While one vessel is in the drying phase (adsorption), the other vessel is being dried again (regeneration).

A partial stream of dried air is expanded to atmospheric pressure via a nozzle (6) and lead across the desiccant bed for regeneration and via a solenoid valve (5) and a silencer (7) to the atmosphere.

HED/ALD/MSD 0005-1000

Features HED/ ALD/ MSD:	Benefits
Purification package complete with pre-,afterfilter and condensate drain	Turnkey system, no additional installation required, all components from one hand, technically perfectly matched to each other
Prefilter with electronic, level-controlled drain UFM-T	No compressor air losses due to condensate removal, therefore reduction of operating costs
All dryers in cabinet construction	Optimum protection against mechanical damage and against dirt
Generous dimensioned filters	Large filtration surface, therefore low pressure drop and low operating costs
Display of operating status by LED	High operating safety, since all operating status can be detected easily at any time
Intermittent operation standard	Link between dryer and compressor possible on central applications, therefore saving of compressed air
17 sizes available, matched to the compressor flows, with 3 pressure dewpoints each, for choice	Custom made solutions possible, matching exactly customer's requirements; no oversizing of compressors necessary, since lowest possible regeneration air requirements
Comprehensive option package: Dewpoint depending control, start-up device, bypass, pneumatics control, change-over control etc.	Flexibility in application, well thought-o package for economical operation and safe system installation in the compressed air network

Product description:
HED/ALD/MSD: Complete purification package with heatless adsorption dryer, which works on the basis of pressure swing adsorption, with integrated pre- and afterfilter and electronic, level controlled condensate drain

Medium:
Compressed air/ nitrogen

Pressure dewpoint:
HED: -20 °C, ALD: -40 °C, MSD: -70 °C at 100% load

Operating pressure:
min. 4 bar (g) max. 16 bar (g)

Medium temperature:
max. +50 °C

Ambient temperature:
min. +4 °C, max. +50 °C

Power supply:
230 V/ 115 V AC/ 50 – 60 Hz, 24 V DC

Power consumption:
approx. 40 W

Pressure vessel – design, manufacture, testing:
Absorber: acc. to 87/404/EEC Filter: acc. to 97/23/EC

Declaration of conformity:
Type 0005 – 0175: acc. to 2006/95/EC
Type 0225 – 1000: acc. to 97/23/EC

Sizing:

Example:
 $\dot{V}_{nom} = 200 \text{ m}^3/\text{h}$, inlet temperature = 30°C, operating pressure = 10 bar (g), PDP -40°C

$$\dot{V}_{corr} = \frac{\dot{V}_{nom}}{f_p \cdot f_T} = \frac{200 \text{ m}^3/\text{h}}{1.38 \cdot 1.1} = 131.8 \text{ m}^3/\text{h}. \text{ Calculated dryer size: Ultracac ALD, type 0150}$$
